

# Dark Fiber

## Exclusive Network. Private Connectivity.

Manage your own network across our fiber infrastructure.

### Complete Network Control.

Windstream Wholesale Dark Fiber equips customers with physical strands to enable multi-gigabit capacity. Gain an exclusive network and achieve faster time to market for secure, private connectivity between locations - without investing in or maintaining your own fiber infrastructure.

Ideal to meet the high-capacity transport connection needs of hyperscalers and content providers, multi-site large enterprises, service providers, government entities and educational institution and supporting traffic between data centers, to the cloud, private networking between locations, over the internet and for mobile back haul.

You have the experience and knowledge to manage your own network - utilize our resources and industry leadership to achieve next level connectivity and performance.

Our network allows you to build yours - and we're constantly investing in both technology and infrastructure to build, enhance, and expand our footprint and your connectivity, diversity, and reach.

### Why Windstream Wholesale Dark Fiber?

- ~170,000 miles nationwide long-haul and metro fiber network
- Access to major data centers and cable landing stations
- Alternative and unique routes ensuring business continuity
- Proactive monitoring of fiber health status with inline OTDR systems
- Nationwide facilities and field tech support for simplified colocation and dark fiber procurement relationship
- Flexible terms with both IRU and lease options
- Flexibility to support route-specific business needs
- Complete control of network scaling
- Experienced engineering and product teams designing and building our own network
